Summary

Software Engineer specializing in the .NET ecosystem, with experience building production microservices for large-scale enterprise platforms. Strong background in RESTful API design, Clean Architecture, DDD, and CI/CD with Azure DevOps. Able to work across the stack with React and TypeScript when needed. Interested in writing maintainable, testable code and continuously improving engineering practices.

Work Experience

Software Engineer September 2025 – Present

iTechwz Company Limited - Vietnam

- Develop and maintain a large enterprise knowledge-management and content-authoring platform built on .NET microservices and a React-based SPA portal that publishes content to multiple downstream CMS targets.
- Migrate legacy CMS features and authoring workflows into the new platform, redesigning data models, APIs, and publishing flows to align with the new architecture while preserving content continuity for existing users.
- Design and implement an asynchronous, queue-backed sequential publishing pipeline on Azure Service Bus to decouple long-running publishing work from the API, with idempotent handlers, retries with back-off, dead-letter-queue replay, and large-payload handling.
- Build an event-driven automation flow for a new publishing model, modeled as a state machine across publishing stages with metadata enrichment and recovery from partial failures.
- Build authoring views, document management, and rich-text editing features, integrate backend APIs, and handle file uploads, large payloads, and optimistic concurrency.
- Set up CI/CD with Azure DevOps YAML pipelines covering builds, unit and integration tests, security scans, and multi-environment deployments.
- Apply an LLM-wiki pattern to build a structured project knowledge base from source code and documentation, and contribute to internal AI agent frameworks, including custom agents, skills, prompts, and instructions, to accelerate onboarding, code review, and task execution.
- **Tech:** C#, .NET 8, ASP.NET Core, EF Core, Azure Service Bus, Azure Functions, Azure Blob Storage, Entra ID / MSAL, React 18, TypeScript, Fluent UI, Azure DevOps, 1ES Pipelines, MVC, Microservices, DDD, Clean Architecture, CQRS

Remote Software Engineer (Part-time / Contract) January 2025 – April 2026

Omnitech Inc - Canada

- Built admin and customer-facing applications and FastAPI endpoints, implementing Keycloak-based authentication and role-based access control across multiple user roles.
- Automated container builds and deployments to AWS via GitHub Actions, cutting release time from hours to minutes.
- **Tech:** React.js, Python, FastAPI, PostgreSQL, Docker, AWS (EC2, S3, ECS), Keycloak, GitHub Actions

Software Engineer Intern October 2024 – March 2025

FPT Software - Vietnam

- Triaged and fixed backend bugs across multiple services. Supported root-cause investigation and improved production stability.
- Monitored AWS workloads and integrated backend with MySQL and Elasticsearch. Set up alerts to catch incidents before user impact.
- **Tech:** FastAPI, React.js, AWS (EC2, S3, ECS), MySQL, Elasticsearch

Projects

Duora January 2026 – Present

Online Escrow Platform

- **Role:** Founder, Full Stack Developer, DevOps (team size: 1).
- Built an escrow platform that protects buyers and sellers by holding payments until both sides complete the transaction, covering marketplace, freelance, digital-product, and peer-to-peer use cases.
- Implemented transaction, dispute, evidence-submission, and reviewer-decision workflows. Designed the data model on PostgreSQL with Marten event sourcing.
- **Tech:** .NET 8, ASP.NET Core, PostgreSQL, Marten, Supabase Auth, React, TypeScript, Vite, React Query, Zustand, Tailwind CSS, Clean Architecture, DDD, event-driven architecture, self-hosted on VPS.

Scientific Research Project Management System for HyperDataLab January 2026 – May 2026

Internal Research Management and AI Knowledge Platform

- **Role:** Team Lead, Full Stack Developer, DevOps (team size: 4).
- Built a web platform for managing research projects, papers, datasets, references, and team collaboration for a research lab.
- Implemented AI and RAG workflows for paper summaries, question answering, key information extraction, study comparison, and citation suggestions.
- **Tech:** .NET 8, ASP.NET Core, PostgreSQL, Marten, Keycloak, React, TypeScript, Vite, React Query, Zustand, Tailwind CSS, Microservices, Clean Architecture, DDD, self-hosted on a VPS.

Education

Bachelor of Software Engineering September 2022 – May 2026

FPT University - Vietnam

- GPA: 3.4 / 4.00 | 50% University Scholarship | Top 100 Software Engineering Students of the Semester, 2024

Skills

- **Primary:** C#, ASP.NET Core, EF Core, React, TypeScript, SQL Server, Azure Services, Azure DevOps
- **Secondary:** Python, FastAPI, PostgreSQL, MongoDB, Redis, AWS, Docker, GitHub Actions
- **Practices:** MVC, Microservices, DDD, Clean Architecture, CQRS, Event-Driven Architecture, System Design, RESTful APIs, OOP, SOLID, Unit & Integration Testing, CI/CD, Agile/Scrum
- **AI & Agentic Workflows:** GitHub Copilot and Claude for prompt design, custom agents, skills, and instructions. Built a personal LLM-wiki and .github multi-agent system for onboarding, code review, and task execution.
- **Languages:** English - B2
