Summary

Software Engineer focused on C#, .NET, and Azure, with hands-on experience in API integrations, event-driven workflows, and enterprise CMS modernization. Work spans service design, implementation, testing, and CI/CD, with additional experience in React, Python, and AWS infrastructure as code.

Skills

Programming Languages: C#, Python, TypeScript, SQL.
Backend: .NET 8, ASP.NET Core, EF Core, FastAPI, RESTful APIs.
Frontend: React, TanStack Query, Zustand, Redux Toolkit.
Databases: SQL Server, PostgreSQL, Azure Cosmos DB, DynamoDB.
Cloud & Infrastructure: Azure, AWS, AWS CDK (Infrastructure as Code), Docker.
DevOps & CI/CD: Azure DevOps, GitHub Actions.
Architecture: Microservices, Event-Driven Architecture, DDD, CQRS, Clean Architecture, Event Sourcing.
Engineering Practices: OOP, SOLID, Unit Testing, Integration Testing, Agile/Scrum.
Languages: English (B2).

Work Experience

Software Engineer Sep 2025 - Present
iTechwx Company Limited - Vietnam

- Develop .NET microservices and React authoring workflows for an enterprise knowledge-management platform, supporting document management, optimistic concurrency, and publishing to multiple downstream CMS targets.
- Design and implement an Azure Service Bus publishing pipeline that decouples long-running work from API requests, with sequential processing, idempotent handlers, back-off retries, dead-letter replay, and large-payload handling.
- Migrate legacy CMS features by redesigning data models, APIs, and publishing flows while preserving existing content and continuity for users.
- Model automated publishing as an event-driven state machine with metadata enrichment and recovery paths for partially completed workflows.
- Build Azure DevOps YAML pipelines covering builds, unit and integration tests, security scans, and deployments across environments.
- Investigate and remediate security findings tracked in Microsoft Service 360.
- Build a source-grounded project knowledge base and contribute reusable AI agents and instructions for onboarding, code review, and task execution.

Software Engineer (Part-time / Contract) Jan 2025 - Present
Omnitech Inc - Canada

- Deliver full-stack features for a financial research platform using React, FastAPI, and AWS, including market-data visualization, company analysis, stock screening, watchlists, and AI-assisted research.
- Integrate external market-data providers through FastAPI services and data-access layers; implement authentication and concurrency handling for DynamoDB-backed user workflows.
- Manage infrastructure as code with AWS CDK across environments; maintain automated tests, GitHub Actions pipelines, and local AWS emulation for application and infrastructure validation.
- Build quantitative research workflows with Python, NautilusTrader, and Jupyter, supporting multiple trading strategies, reusable market-data pipelines, and performance analysis.

Software Engineer Intern Oct 2024 - Mar 2025
FPT Software - Vietnam

- Resolved backend defects across services and supported root-cause analysis for production issues.
- Monitored AWS workloads, configured alerts, and supported backend integrations with MySQL and Elasticsearch.

Projects

Duora - Escrow Platform Jan 2026 - Present
Founder & Software Engineer duora.vn

- Independently design, build, and deploy an escrow platform covering transaction lifecycles, disputes, evidence submission, and reviewer decisions.
- Model transaction workflows with PostgreSQL and Marten event sourcing; implement .NET APIs and a React frontend, integrate Supabase Auth, and deploy to a self-hosted VPS.

Education

Bachelor of Software Engineering Sep 2022 - May 2026
FPT University - Vietnam

GPA: 3.4 / 4.0 | 50% University Scholarship | Top 100 Software Engineering Students of the Semester, 2024
